Professional Summary

Full-stack Software Engineer with 15+ years of experience.

Actively looking for opportunities in the US and abroad. I expect to re-align work hours with the team immediately and relocate as soon as possible.

I've built a software engineering career through a self-driven transition from customer service into development, and grew from that foundation using formal training and continuous hands-on delivery. Currently crafting robust, accessible software solutions. Expertise in front-end development, technical mentorship, and cross-functional collaboration. Proven track record of leading large-scale projects, driving accessibility initiatives, and mentoring development teams. Strong communicator skilled at translating complex technical concepts for diverse stakeholders.

Skills

Languages: JavaScript/TypeScript, HTML, CSS, Java, SQL, AutoIt, C#

Libraries & Frameworks: Handlebars, MySQL, MongoDB, Express, React, Vue, Bootstrap, Redux, Node, Sequelize, Mongoose, SQLite, Apollo, GraphQL, Spring Boot,

Tools: Git, Jest, ESLint, GitHub Copilot, Jira, Bitbucket, Confluence, Ansible, Google Lighthouse, Axe Devtools, AMP, SonarQube,

Practices: Agile/Scrum, Test-Driven Development, REST API Design, CI/CD, Object-Oriented Programming

Certifications

IAAP Certified Professional in Accessibility Core Competencies (CPACC)

Experience

Vice President, Software Engineer II

Bank of America | Charlotte, NC
February 2020 – Present

- Lead front-end development of award-winning consumer-facing projects, collaborating with UX designers, business analysts, accessibility specialists, and global development teams
- Manage multiple projects at a time with various roles: mentor, team-lead, lead developer, consultant
- Adhere strictly to SDLC guidelines for planning, development, testing, and release
- Develop reusable accessibility processes and UI patterns, establishing team as department-wide leader in inclusive design
- Collaborate with interdepartmental teams to create a platform of responsive reusable UI components built for performance, accessibility, and usability
- Document legacy C# (.NET 4.8) systems and design back-end solutions to replace legacy systems, updating to a modern SOLID pattern for more robust and modular product
- Maintain application security through regular audits and updates to dependencies, observing very strict GIS rules for FOSS end-of-life resolution
- Build testing responders using Node.js, Express, and TypeScript to replicate production backend logic
- Mentor junior developers and conduct technical interviews for developer positions

- Manage work items using Jira, create documentation in Confluence, and perform code reviews using Git, Bitbucket, Jenkins, and Ansible Tower
- Simplify day-to-day tasks with Bash scripting

Instructional Staff

2U/EdX | Remote
April 2019 – December 2024

- Taught full-stack web development for Penn LPS and University of Connecticut coding bootcamps
- Instructed cohorts of 30+ students in HTML, CSS, JavaScript/TypeScript, Node.js, React/Redux, SQL, MongoDB, and GraphQL
- Maintained 80%+ graduation rate with consistently high ratings from students and administrators

Sr. Automation Engineer / Business Analyst

Windstream | Charlotte, NC
May 2015 – February 2020

- Built internal full-stack applications and automation tools for billing, order entry, and service workflows
- Generated over $4M annually in labor cost savings and $3M annually in revenue recovery through audits and automation
- Designed SQL reporting pipelines to support automated business processes
- Created dashboards and KPI reports in Salesforce and Business Objects to demonstrate automation ROI

Supervisor

Windstream | Charlotte, NC
September 2012 – May 2015

- Led team of 12 employees through daily operations including standup meetings, onboarding, and status reporting
- Collaborated with peer supervisors to guide department through organizational changes and leadership transitions
- Trained team members in automation tool usage and maintenance
- Created documentation for department-wide processes and tools
- Educated team on process analysis for project intake and automation opportunities

Analyst II

Windstream | Charlotte, NC
September 2008 – September 2012

- Self-taught coding and system automation principles through independent study and direct application
- Analyzed and optimized business processes for automation
- Developed user-mimicking automation processes including screen-scraping, logic flows, and API integrations
- Collaborated with process owners to automate complex workflows previously deemed unsuitable for automation

Education

UNC Charlotte | Full Stack Web Development Bootcamp | 2018

Wingate University | B.S. Psychology | 2005
